

Ophthalmic 'Vision' Binoculars are a novel magnifying system offering unlimited potential for recreational use. Worn just like traditional spectacles, the lightweight binoculars give 2x magnification while keeping both hands free.

Two side-mounted rotary wheels give precise focus control and can be adjusted to give independent focus for each eye. The front lens is made from Acrylic and optimised to give a sharp image with minimal distortion.

The glasses are ideal for indoor activities such as TV, theatre or opera and uniquely suited to outdoor pursuits such as fishing.
